

5-1 Special Right Triangles

1. $45^\circ-45^\circ-90^\circ$ Triangle Theorem: The length of the hypotenuse is $\sqrt{2}$ times the length of a leg.

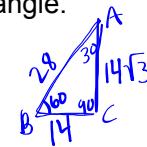

2. $30^\circ-60^\circ-90^\circ$ Triangle Theorem: The length of the hypotenuse is twice the length of the shorter leg, and the length of the longer leg is $\sqrt{3}$ times the length of the shorter side.

3. Find the missing measures.

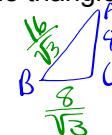

ex) If BC = 14 inches, find AC if triangle ABC is a $30^\circ-60^\circ-90^\circ$ triangle.

ex) Using the same triangle, find BC if AC = 8 inches.

$$\frac{8}{\sqrt{3}} = \frac{x\sqrt{3}}{\sqrt{3}}$$

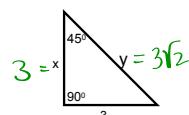

$$\frac{8}{\sqrt{3}} = \frac{\cancel{x}\sqrt{3}}{\cancel{\sqrt{3}}}$$

$$\frac{8}{\sqrt{3}} = \frac{8\sqrt{3}}{\sqrt{3}}$$

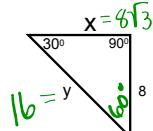

4. Find the missing measures.

ex) Find x and y.

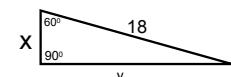

ex) Find x and y.

$$\begin{aligned} x &= \sqrt{3} \\ 1 - \sqrt{3} - 2 &= 0 \\ x &= 2 \\ y &= 2\sqrt{3} \end{aligned}$$

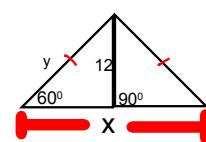

5. Find the missing measures.

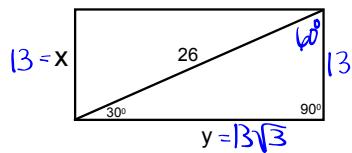

ex) Find x and y.

ex) Find x and y.

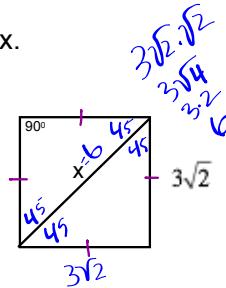

6. Find x and y.

$$13 = x$$

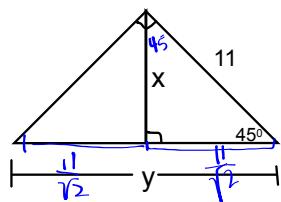

$$y = 13\sqrt{3}$$

7. Find x.

$$\begin{aligned} 30 - 60 - 90 & \\ x & \quad x\sqrt{3} \quad 2x \\ 45 - 45 - 90 & \\ x & \quad x \quad x\sqrt{2} \end{aligned}$$

8. Find x and y.

$$\frac{11}{\sqrt{2}} \cdot \frac{11}{\sqrt{2}}$$

$$\frac{11}{\sqrt{2}} + \frac{11}{\sqrt{2}} = \boxed{\frac{22}{\sqrt{2}}}$$
