

6.2 Introduction to Quadratics & Cubics

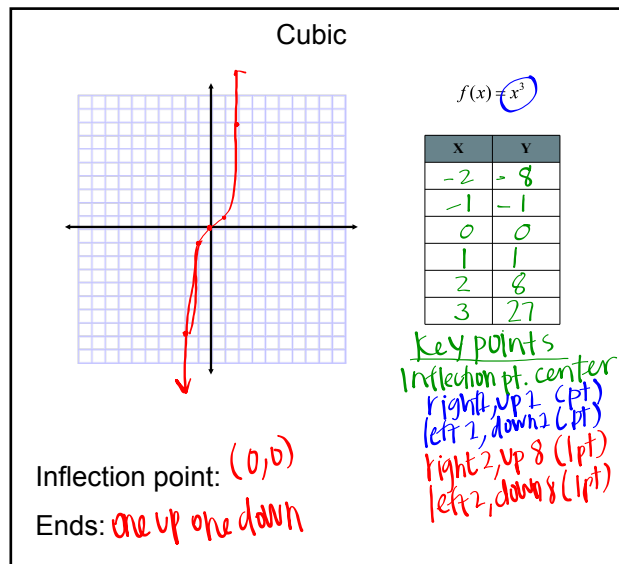

How many times does a quadratic cross the x-axis?

2 times
or 1 time
or none

y-axis?

1 time

How many times does a Cubic cross the x-axis?

1 time

y-axis?

1 time

Quadratic (cont.)

Graphing Form: $f(x) = a(x - h)^n + k$

(h, k)

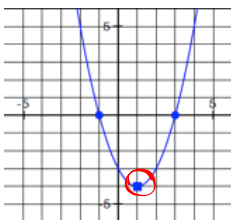

Quadratic: Vertex

Cubic: inflection point

What do you notice about the signs of (h,k)?

x's lie!

What is the vertex of the following quadratic?

$$f(x) = (x - 2)^2 - 1$$

Vertex: $(2, -1)$

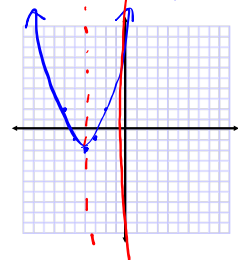

Vertex: $(1, -4)$

Find the vertex and graph.

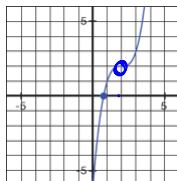

$$f(x) = (x - 2)^2 - 1$$

$$g(x) = (x + 4)^2 - 2$$

What is the inflection point of the following cubic?

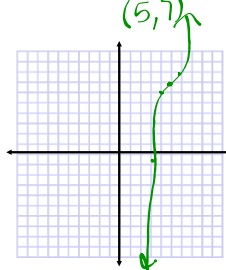

$$f(x) = (x-5)^3 + 7$$

Inflection Point: (5,7)

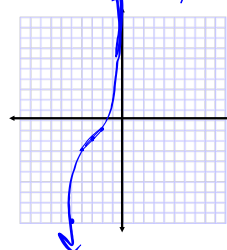

Inflection Point: (2,2)

Find the inflection point and graph:

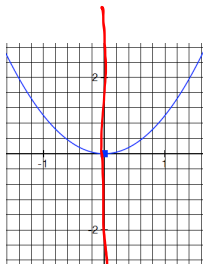

$$f(x) = (x-5)^3 + 7$$

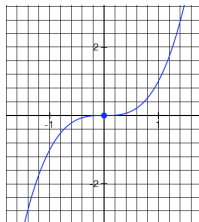

$$g(x) = (x+3)^3 - 2$$

Symmetry

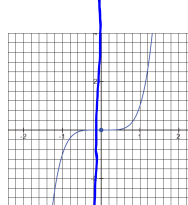

Even: symmetric about y-axis

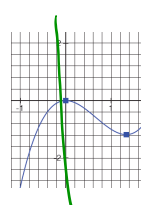

Odd: symmetric about origin

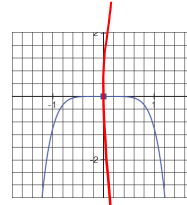

Even, Odd, or Neither?

odd

neither

even
