9.5 Series

#71

Summation

$$a_1 + a_2 + a_3 + ... + a_n$$

(how do we write the sum of long lists of numbers?)

sigma means summation

Summation notation:

 $\sum_{k=1}^{n} a_{k} = a_{1} + a_{2} + a_{3} + \dots + a_{n}$

$$\sum_{k=1}^{5} 3k = 3(1) + 3(2) + 3(3) + 3(4) + 3(5) = 45$$

$$\sum_{k=5}^{8} k^2 = 5^2 + 6^2 + 7^2 + 8^2 = 174$$

$$2+5+8+11+...+29$$

$$d=3 q=2 n=?$$

$$|0|$$

$$|0|$$

$$|k=1|$$

$$\begin{array}{c}
a_1 + a_1 + (n-1)d \\
2q = 2 + (n-1)3 a_n = 3n - 1 \\
2q = 2 + (n-1)3 a_n = 3n - 1 \\
2q = 3(n-1)a_n = 3n - 1 \\
2q = 3(n-1)a_n = 3n - 1 \\
2q = 1 + 1 \\
1 = 1
\end{array}$$

Sum of a Finite Arithmetic Sequence:

$$\sum_{k=1}^{n} a_k = a_1 + a_2 + a_3 + \dots + a_n$$

$$= \frac{n(a_1 + a_n)}{2}$$
Memorize
For $+> \frac{n(a_1 + a_n)}{2}$
Where it difference
$$= \frac{n(a_1 + a_n)}{2}$$
Test $= \frac{n}{2}(2a_1 + (n-1)d)$

A theater has 8 seats in the first row. Each successive row has 2 additional seats. The top row has 24 seats. How many seats in a section?

$$\begin{array}{lll}
a_1 = 8 & d = 2 & a_n = 24 & \frac{n}{2}(2a_1 + (n-1)d) \\
a_n = a_1 + (n-1)d & \frac{n}{2}(2a_1 + (n-1)d) \\
24 = 8 + (n-1)2 & \frac{n}{2}(2a_1 + (n-1)d) \\
-8 - 8 & \frac{n}{2}(2a_1 + (n-1)d) \\

Sum of a Finite Geometric Sequence: #73

$$\sum_{k=1}^{n} a_k = a_1 + a_2 + a_3 + \dots + a_n$$

$$\frac{\text{for}}{\text{for}} = \frac{a_1(1-r^n)}{1-r}$$

Find the sum of:
$$a_n = a_1 \cdot r^{n-1}$$

$$4, \frac{-4}{3}, \frac{4}{9}, \frac{-4}{27}, \dots, 4\left(\frac{-1}{3}\right)^{10}$$

$$4 = 4, r = -\frac{1}{3}, r = 1$$

$$4(1 - (-1/3)^{11})$$

$$-(-1/3)^{10}$$

Series:

#74

def: sum of the terms in a sequence

sum: usually a total of a finite number of items added together

partial sums: the sums of a specific number of terms in the infinite sequence

(these are used to talk about the infinite series)

as you look at the partial sums, they approach a specific number

$$\lim_{n\to\infty}\sum_{k=1}^n a_k = S$$

$$1, \frac{1}{2}, \frac{1}{4}, \frac{1}{8}, \frac{1}{16}, \dots$$

$$S_{1} = | S_{2} = | .5$$

$$S_{2} = | .5$$

$$S_{3} = | .75$$

this is called a converging series

your partial sums could approach ∞ , $-\infty$,

or the limit

or the limit doesn't exist because the
$$\lim_{n\to\infty}\sum_{k=1}^n a_k = \infty, -\infty, \text{ doesn't exist}$$

numbers oscillate

$$3+6+9+12+...$$

 $5_1=3$ $5_2=9$ $5_3|8$

$$2-2+2-2+...$$

 $5|=25_2=05_3=25_4=0$

this is called a diverging series

#75

Infinite Geometric Series:

$$\sum_{k=1}^{\infty} a \cdot r^{k-1} = S \qquad \text{converges if } |r| < 1$$

it will converge to:
$$S = \frac{a}{1-r}$$
 a = first term r = common ratio

Determine if the geometric series converges or diverges. If it converges, find its sum.

$$\sum_{n=0}^{\infty} \left(-\frac{4}{5}\right)^n \qquad \left|-\frac{4}{5}\right| \ \angle 1 \qquad \text{Converges} \qquad \frac{1}{1+\frac{4}{5}} = \frac{15}{9}$$

$$\sum_{n=1}^{\infty} \left(\frac{\pi}{2}\right)^{n} \qquad \left|\frac{\pi}{2}\right| = 1.57 \quad \text{DivergeS}$$

$$\sum_{n=0}^{\infty} 2^{n} \left(\frac{1}{5} \right)^{n} \left(\frac{1}{5}$$
